

Introducing EXPLORER 540

The world's first dual mode BGAN & 3G M2M terminal

Dear valued Land Mobile Partner,

We are pleased to announce the new EXPLORER 540, Cobham SATCOMs latest edition to the established range of EXPLORER satellite terminals. The EXPLORER 540 is the first EXPLORER M2M terminal and the world's first M2M terminal to operate on both Inmarsat BGAN and cellular networks. The optional EXPLORER 3G modem is integrated in the design and when installed the EXPLORER 540 is turned into a true dual mode terminal.

As the only BGAN M2M terminal to offer dual mode operation, EXPLORER 540 provides unique flexibility and M2M data communication cost-control, as it ensures the most cost-effective communication service can be chosen depending on location. Securing continuity of M2M IP data transfer, which often originates in hard to reach, remote locations, dual-mode operation delivers significant failover capabilities with the automatic switching between the BGAN network and the cellular network. For organisations transferring critical real-time data within their M2M networks, EXPLORER 540 M2M's dual mode can provide unmatched service availability.

The EXPLORER 540 will be Inmarsat BGAN M2M Certified which includes no connection charges, free over-the-air software upgrades and all the BGAN M2M specific remote management features. The terminal will be Type Approved as a BGAN Class 2 terminal and well-suited for BGAN Link services as well.

The terminal weighs 1.6 kg and the size is only 20 x 20 cm making it the smallest and lightest BGAN M2M terminal. The durable casing and a dust and water resistant IP66 design makes the EXPLORER 540 the perfect choice for any kind of fixed outside installation. It comes with a pole-mount and like the other EXPLORER BGAN terminals it is simple to set up and operate.

The EXPLORER 540 will begin shipping in the beginning of 2016 and the terminal can be ordered from November 2015 where pricing will be available. A preliminary Product Sheet and a Sales .The Cellular EXPLORER 3G Modem will be available in Q2 2016.

Best Regards,
